Professional Summary

Software Engineer with 2+ years of experience building event-driven **Spring Boot**/**Node.js** systems and **AI-integrated** full-stack products. Experienced across backend services, cloud deployments, and modern frontend interfaces, with a focus on scalable, production-ready solutions.

Skills

Languages: Java, JavaScript, TypeScript
Backend: Spring Boot, Spring Security, Hibernate/JPA, Node.js, Express.js, NestJS
Frontend: React, TailwindCSS, HTML, CSS
Cloud & DevOps: Azure, AWS, Docker, Kubernetes, Helm, CI/CD
Data & Messaging: PostgreSQL, Oracle, MongoDB, Apache Kafka, Azure Service Bus, Redis
AI & Tools: Claude Code, GitHub Copilot, Git
Core CS & Others: DSA, OOP, System Design, API Gateway, ELK Stack, Grafana

Experience

Bajaj Finserv Health Ltd - *Software Development Engineer, Pune, India* September 2025 - Present

- Re-architected the Hospital Event Listener onto an event-driven **Apache Kafka** pipeline, boosting throughput **3x** to **1,000 TPM**, decoupled from the Claim Processing System.
- Built **SAML 2.0 SSO** federation for **15+ enterprise partners** (Google, Accenture, AON, Wipro) via a multi-tenant **Spring Security SAML2** + **Okta** setup, removing per-user credential overhead.
- Designed a storage abstraction spanning **Azure Blob Storage** and NAS/Kubernetes for a company-wide file microservice, sustaining **200K+ daily transactions** at sub-100ms p99 across **15+ portals**.
- Built a **Claude**-prompted migration framework mapping **50+ JSP pages** to **40+ REST APIs**, leading legacy Java Struts apps to Java 25 from inventory through deployment.
- Added signed, time-bound **SAS URLs** and portal-scoped **RBAC** plus a full CRUD API to the file platform, now the standard file layer across **15+ internal portals**.

Bajaj Finserv Health Ltd - *Associate Software Development Engineer, Pune, India* June 2024 - September 2025

- Built a centralized **JWT + RBAC** authentication microservice with Kafka-driven employee sync, cutting authentication latency **80%** (1,000ms to 200ms) at peak load.
- Set up an async **Penny Drop Verification** pipeline on Azure Service Bus, cutting verification time **85%+** (20min to under 3min) and unblocking **500+ daily onboarding requests**.
- Shipped a Payment Operations Portal end-to-end (React, Spring Boot) for orders, settlements, and transactions, replacing **3-4 hours** of daily manual reconciliation for the ops team.

Projects

Shopper Assist | *React*, *Node.js*, *Express*, *Supabase (Postgres)*, *pgvector*, *Gemini API* GitHub

- Built an AI shopping assistant that turns a photo/text list into an optimal in-store route: **Gemini** vision extraction, then semantic SKU matching, then shortest-path aisle routing, behind one orchestrated /plan API.
- Implemented hybrid item matching (**pgvector** cosine similarity over Gemini embeddings + **pg_trgm** lexical fallback) against a 200+ SKU catalog on **Supabase**, and modeled the store as a weighted graph for shortest-path route ordering.

Job Tracker | *React*, *Java*, *Spring Boot*, *PostgreSQL*, *Claude API* GitHub

- Built a full-stack job application tracker (**React** frontend, **Spring Boot** REST API) that uses the **Claude API** to parse job descriptions, score them against my resume, and persist ATS match scores in **PostgreSQL** to rank openings.
- Wired a scraper-side notifier that pushes newly discovered, high-match job postings straight to my phone in real time via **ntfy** push notifications, no app polling required.

Education

University Institute of Technology, Bhopal - *B.Tech - Computer Science & Engineering, CGPA: 8.3/10* Aug 2020 - May 2024
