Aryaman Swami

+91 9617949056 | aryamanswami21@gmail.com | LinkedIn | GitHub | Pune, India

Professional Summary

Software Engineer with 2+ years of experience designing and developing scalable, distributed microservices using **Java, Spring Boot, and Node.js**. Experienced in building event-driven architectures with **Apache Kafka**, enterprise authentication systems using **Spring Security and SAML 2.0 SSO**, and high-throughput file management services. Hands-on experience with **Azure, Kubernetes, and cloud-native application deployment**.

Technical Skills

Languages: Java (8/11/17), SQL, TypeScript, JavaScript

Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST, Microservices, Node.js, Express.js, NestJS, OAuth2/OIDC

Data & Messaging: PostgreSQL, MongoDB, Redis, Elasticsearch, Apache Kafka, Azure Service Bus

Cloud & DevOps: Azure, Docker, Kubernetes, Helm, Git, Maven, Gradle, CI/CD

Testing & Observability: JUnit 5, Mockito, TDD, SonarQube, Swagger/OpenAPI, ELK/Kibana, Grafana

Frontend: React, HTML, CSS, TailwindCSS

Experience

Bajaj Finserv Health Ltd. Pune, India

Software Development Engineer *Sep 2025 – Present*

- Increased Hospital Event Listener throughput by **3x to 1,000 TPM** by redesigning the processing pipeline using **Apache Kafka**, decoupling event ingestion from the Claim Processing System.
- Designed and implemented a multi-tenant enterprise SSO platform using **Spring Security SAML2 and Okta**, onboarding **15+ enterprise partners** including Google, Accenture, AON, and Wipro while eliminating individual credential management.
- Architected and owned a centralized file management microservice serving **15+ portals**, handling **200K+ daily transactions** with **sub-100ms p99 latency** through a unified storage abstraction over **Azure Blob Storage and NAS**.
- Modernized **4 legacy portals** from **Java 8 to Java 25** and reduced application heap usage by **60% (3 GB to 1.2 GB)** by offloading file transfers directly to Azure Blob Storage using **SAS URLs**.

Associate Software Development Engineer *Jun 2024 – Sep 2025*

- Built a centralized **JWT and RBAC authentication microservice** with Kafka-driven employee synchronization, reducing authentication latency by **80% (1,000ms to 200ms)** under peak load.
- Designed an asynchronous **Penny Drop Verification** pipeline using **Azure Service Bus**, reducing verification time by **85%+ (20 minutes to under 3 minutes)** and enabling **500+ daily onboarding requests**.
- Developed an end-to-end **Payment Operations Portal** using React and Spring Boot for orders, settlements, and transactions, eliminating **3–4 hours of daily manual reconciliation** for the operations team.

Projects

Shopper Assist | *React, Node.js, Express, Supabase, PostgreSQL, pgvector, Gemini API* GitHub

- Developed an AI-powered shopping assistant that converts image/text shopping lists into optimized in-store routes using **Gemini Vision**, semantic SKU matching, and graph-based shortest-path algorithms.
- Implemented hybrid item matching using **pgvector** cosine similarity over Gemini embeddings and **pg_trgm** lexical fallback against a **200+ SKU catalog** on Supabase; modeled store layouts as weighted graphs for shortest-path routing.

Job Tracker | *React, Java, Spring Boot, PostgreSQL, Claude API* GitHub

- Built a full-stack job application tracking platform using **React, Spring Boot, and PostgreSQL**, integrating Claude API to extract job requirements, calculate resume-job compatibility scores, and rank opportunities.
- Implemented a scraper-side notification service that delivers newly discovered, high-match job postings through real-time **ntfy push notifications**, eliminating the need for application polling.

Education

University Institute of Technology, Bhopal Aug 2020 – May 2024

B.Tech – Computer Science & Engineering *CGPA: 8.3/10*
