Professional Summary

Software Engineer with 2+ years of experience building event-driven **Spring Boot**/**Node.js** systems and **AI-integrated** full-stack products on Azure and Kubernetes. Delivered **Apache Kafka** pipelines, multi-tenant **SAML 2.0 SSO**, and a company-wide file microservice serving 15+ portals at 200K+ daily transactions.

Skills

Languages: Java, JavaScript, TypeScript
Backend: Spring Boot, Spring Security, Hibernate/JPA, Node.js, Express.js, NestJS
Frontend: React, TailwindCSS, HTML, CSS
Cloud & DevOps: Azure, AWS, Docker, Kubernetes, Helm, CI/CD
Data & Messaging: PostgreSQL, Oracle, MongoDB, Apache Kafka, Azure Service Bus, Redis
AI & Tools: Claude Code, GitHub Copilot, Git
Core CS & Others: DSA, OOP, System Design, API Gateway, ELK Stack, Grafana

Experience

Bajaj Finserv Health Ltd - *Software Development Engineer, Pune, India* Sep 2025 - Present

- Increased Hospital Event Listener throughput **3x** to **1,000 TPM** by re-architecting it onto an event-driven **Apache Kafka** pipeline, decoupled from the Claim Processing System.
- Onboarded **15+ enterprise partners** (Google, Accenture, AON, Wipro) onto **SAML 2.0 SSO**, removing per-user credential overhead, by building a multi-tenant **Spring Security SAML2** + **Okta** federation.
- Sustained **200K+ daily transactions** at sub-100ms p99 across **15+ portals** by designing a storage abstraction over **Azure Blob Storage** and NAS/Kubernetes for a company-wide file microservice.
- Migrated **50+ JSP pages** to **40+ REST APIs** and moved legacy Java Struts apps to Java 25 by building a **Claude**-prompted migration framework, leading it from inventory through deployment.
- Made the file platform the standard file layer across **15+ internal portals** by adding signed, time-bound **SAS URLs**, portal-scoped **RBAC**, and a full CRUD API.

Bajaj Finserv Health Ltd - *Associate Software Development Engineer, Pune, India* Jun 2024 - Sep 2025

- Cut authentication latency **80%** (1,000ms to 200ms) at peak load by building a centralized **JWT + RBAC** authentication microservice with Kafka-driven employee sync.
- Cut verification time **85%+** (20min to under 3min), unblocking **500+ daily onboarding requests**, by setting up an async **Penny Drop Verification** pipeline on Azure Service Bus.
- Eliminated **3-4 hours** of daily manual reconciliation for the ops team by shipping a Payment Operations Portal end-to-end (React, Spring Boot) for orders, settlements, and transactions.

Projects

Shopper Assist | *React*, *Node.js*, *Express*, *Supabase (Postgres)*, *pgvector*, *Gemini API* GitHub

- Built an AI shopping assistant that turns a photo/text list into an optimal in-store route: **Gemini** vision extraction, then semantic SKU matching, then shortest-path aisle routing, behind one orchestrated /plan API.
- Implemented hybrid item matching (**pgvector** cosine similarity over Gemini embeddings + **pg_trgm** lexical fallback) against a 200+ SKU catalog on **Supabase**, and modeled the store as a weighted graph for shortest-path route ordering.

Job Tracker | *React*, *Java*, *Spring Boot*, *PostgreSQL*, *Claude API* GitHub

- Built a full-stack job application tracker (**React** frontend, **Spring Boot** REST API) that uses the **Claude API** to parse job descriptions, score them against my resume, and persist ATS match scores in **PostgreSQL** to rank openings.
- Wired a scraper-side notifier that pushes newly discovered, high-match job postings straight to my phone in real time via **ntfy** push notifications, no app polling required.

Education

University Institute of Technology, Bhopal - *B.Tech - Computer Science & Engineering, CGPA: 8.3/10* Aug 2020 - May 2024
