Professional Summary

Software Engineer with 2+ years designing scalable, secure **Java/Spring Boot** microservices across fintech and healthtech. Skilled in **Object-Oriented Design**, **event-driven architectures**, RESTful web services, and cloud-native platforms on **Azure** and **AWS** — with a track record of code reviews, unit testing, and owning mission-critical services from design to production.

Experience

Bajaj Finserv Health Ltd — *Software Development Engineer* Jul 2024 – Present

- Designed and shipped a centralized **JWT + RBAC Authentication Microservice** in **Spring Boot** powering every company portal, applying secure coding practices with **Kafka-driven employee sync** and **Redis-backed caching** to slash authentication latency by **80%** (1,000ms → 200ms) at peak load.
- Spearheaded **SAML 2.0 SSO** federation with **15+ Fortune 500 partners** (Google, Accenture, AON, Wipro), engineering a multi-tenant **Spring Security SAML2 + Okta** integration that applied secure coding practices to unlock enterprise onboarding and eliminate credential management overhead for thousands of external users.
- Drove the re-architecture of the **Hospital Portal Spring** microservice from brittle synchronous callbacks to a fully **event-driven pipeline** on **Apache Kafka**, decoupling it from the Claim Processing System and unlocking **3x throughput** while eliminating cascading failure modes.
- Owned the design and rollout of a company-wide **Spring Boot File Handling Microservice** with a polymorphic **storage abstraction layer** bridging **Azure Blob Storage** and **NAS/Kubernetes PVs** — sustaining **150K+ daily transactions** at **sub-100ms p99 latency** with **99.99% uptime**.
- Engineered a multi-phase **AI-assisted migration framework** using custom **Claude skills** to modernize legacy **Java Struts** applications to **Java 25** — automated functionality mapping across **50+ JSP pages**, generated **40+ REST APIs** using **Object-Oriented** design with contract-first planning, and orchestrated phased implementation from inventory through deployment.
- Hardened the file platform with cryptographically **signed time-bound SAS URLs**, portal-scoped **RBAC enforcement**, unit-tested REST endpoints, and a full-suite operations API (upload, download, list, copy, move) — now the de-facto file management standard across **15+ internal portals**.

Bajaj Finserv Health Ltd — *Software Development Engineer Intern* Jan 2024 – Jun 2024

- Engineered an asynchronous **Penny Drop Verification** pipeline on **Azure Service Bus**, collapsing verification time by **90%** (20 min → 2–3 min) and unblocking **500+ daily onboarding requests** previously bottlenecked on banking callbacks.
- Built a Payment Operations Portal end-to-end for order, settlement, and transaction lifecycle management — automating away **3–4 hours** of daily manual reconciliation.

Skills

Languages: Java, RxJava, JavaScript, C++
Backend: Spring Boot, Spring Security, Hibernate/JPA, Node.js
Cloud & DevOps: Azure, AWS, Docker, Kubernetes, Helm, CI/CD
AI & Tools: Claude Code, GitHub Copilot, Git
Others: Redis, API Gateway, ELK Stack, Grafana
Databases: PostgreSQL, Oracle, MongoDB
Message Queues: Apache Kafka, ASB
Frontend: React, TailwindCSS
Core CS: DSA, OOP, System Design

Achievements

Sharp Shark Award: Recognized for architecting the **File Handling Microservice** with a unified **Azure Blob + NAS** abstraction, fine-grained **RBAC**, and **expirable SAS URLs** — now powering file ops org-wide.

Stellar Squad Award: Led the Medisep Project migration of **5M+ records** with zero data loss on mission-critical services, coordinating an overnight go-live and ensuring **100%** uptime at launch.

Education

University Institute of Technology, Bhopal — *B.Tech – Computer Science and Engineering* Nov 2020 – May 2024
